REVIEW OF V. L. LOSSIYEVSKIY'S "FUNDAMENTALS  
OF THE AUTOMATIC REGULATION OF TECHNOLOGICAL PROCESSES"

The book constitutes a theoretical treatment of regulators and is intended for those concerned with the design and exploitation of regulated plants in the various branches of industry. The treatment is limited to systems in which only one parameter is regulated and considers only the linear methods of analysis. Considerable space is devoted to the description of adjustment procedures for specific regulators. The bibliography contains 54 references to pertinent Soviet articles and books.

## TABLE OF CONTENTS

<u>CONTENTS</u>	<u>Page</u>
Preface	3
Introduction	6
I. Fundamental Properties of Regulated Plants and of Automatic Regulation; the Effect of These Properties on the Process of Automatic Regulation	9
II. Regulated Plants	
1. Stable, unstable, and neutral plants	33
2. Time constant and acceleration time of a plant	38
3. Differential equations of regulated plants	40
4. <del>Regulated plants</del>	61
5. Evaluation of some of the properties of regulated plants	97
6. Amplification factors of regulated plants	116

50X1-HUM

	<u>Page</u>
III. Automatic Regulators	
1. Construction of various regulators	133
2. Derivation of equations of motion of regulators	147
3. Amplification factors of ideal regulators	162
4. Influence of some factors on operation of a regulator	168
IV. Regulated Systems	
1. Dynamic properties of a regulated system	173
2. Methods of investigation for stable linear regulated systems	174
3. Integration of equations of motion of regulated systems	200
4. Comparison of various methods of investigating stability	203
V. <u>No chapter heading given</u>	
1. Characteristics of regulated plants	210
2. Calibration of pneumatic regulator in units of sensitivity for various positions along the throttling range	213
3. Adjustment for optimum sensitivity of a regulator	214
4. Adjustment for optimum time of elastic feedback	215
5. Determination of optimum adjustment of a regulator from characteristics of the plant	217
6. Determination of the unit velocity of regulation	219
7. Examples of optimum adjustments	222
